Fictional pricing and exercise rules

FICTIONAL HIRING EXERCISE ONLY - NOT FOR PROPERTY OR SAFETY DECISIONS

All rates are invented CAD inputs for repeatable software evaluation. They are not market prices or quotations.

Rate	Material	Unit	Removal CAD	Replacement CAD
R_PIPE	Pipe insulation	linear_m	120	40
R_FLOOR	Floor assembly including adhesive	m2	45	35
R_CEILING	Ceiling finish	m2	60	30
R_PANEL	Exterior panel	m2	85	65

Interpretation rules

Use explicit lab result labels; do not apply a legal concentration threshold.

Detected in any layer means detected for that material zone, retaining every layer result.

Not detected is not a building-wide asbestos-free conclusion.

Inconclusive, unsampled and inaccessible remain unresolved. No invented negative result.

Match by project and sample ID. Unknown, duplicate or conflicting IDs require employee review; never fuzzy-match silently.

Preserve source report, sample, layer and source location for each finding. Low confidence requires review.

Multiple samples in one material zone never multiply its measured quantity.

Exercise review categories

A: Confirmed detected plus poor or damaged condition OR planned disturbance: flag for priority professional review before affected work.

B: Other confirmed detected: professional management review; no automatic removal conclusion.

C: Inconclusive, inaccessible or unsampled: resolve evidence gap; do not claim safe or cleared.

D: Not detected in sampled material: record limited finding; no asbestos-specific cost in this exercise.

Cost scenario and calculations

Scope: Illustrative full removal and replacement scenario for all confirmed detected zones with valid quantities; not a recommendation to remove every zone

Formula: zone cost = quantity * (removal rate + replacement rate); direct = sum zone costs + mobilization + professional assessment allowance; contingency = direct * 0.20; total = direct + contingency

Mobilization Cad: 2500

Professional Assessment Allowance Cad: 1200

Contingency Fraction: 0.2

Apply Fixed Allowances: Once per project when at least one eligible zone is priced

Exclude: taxes, unmeasured materials, unresolved materials, hidden materials, business interruption, engineering design, permit costs

Missing Quantity: Show NOT PRICED and list as exclusion; never zero or fabricate quantity

Rounding: Round money to two decimals

Human review

AI creates a draft. Employee checks IDs, quantities, findings, recommendations and costs before export. Professional review required before real decisions.
